

ACADM: replication in E-MTAB does not establish uniform transportability

Lower hazard in TCGA and E-MTAB; the smaller GSE29609 cohort is inconclusive and points oppositely

TCGA: n = 517, 170 deaths; E-MTAB: n = 101, 23 deaths; GSE29609: n = 39, 17 deaths.

External plotted models are unadjusted; adjusted sensitivity is reported in the evidence ledger.
